Create Category Fails

The screenshot shows a REST client interface with a POST request to `{{baseUrl}} /api-category/create-category`. The request body is a JSON object with a `"description": "string"` field. The response is a `400 Bad Request` with a detailed error message.

Request:

```
POST {{baseUrl}} /api-category/create-category
```

Body:

```
{
  "description": "string"
}
```

Response:

```
{
  "type": "https://tools.ietf.org/html/rfc9110#section-15.5.1",
  "title": "One or more validation errors occurred.",
  "status": 400,
  "errors": {
    "name": [
      "The name field is required."
    ]
  },
  "traceId": "00-3140037c3b76f66b010d919a1cc81890-6c6bfe678d2b68a6-00"
}
```

Create Category Falis

The screenshot shows a REST client interface with the following details:

- URL:** `{{baseUrl}} /api-category/create-category`
- Method:** `POST`
- Body (raw):**

```
1 {  
2   "name": "string"  
3 }
```
- Response (JSON):**

```
1 {  
2   "type": "https://tools.ietf.org/html/rfc9110#section-15.5.1",  
3   "title": "One or more validation errors occurred.",  
4   "status": 400,  
5   "errors": {  
6     "description": [  
7       "The description field is required."  
8     ]  
9   },  
10  "traceId": "00-cb831484191570e50315ff36c9fb6c2f-9802917cef19cc68-00"  
11 }
```
- Status:** `400 Bad Request`
- Duration:** `30 ms`
- Size:** `407 B`

Create Category Falis

The screenshot shows a REST client interface with a POST request to `{{baseUrl}} /api-category/create-category`. The request body is raw JSON: `{ "name": "1Electronic", "description": "Electronic" }`. The response is a 400 Bad Request with the message: `"Category name must not contain any numbers only characters"`.

Request:

- Method: POST
- URL: `{{baseUrl}} /api-category/create-category`
- Body:

```
1 {
2   "name": "1Electronic",
3   "description": "Electronic"
4 }
```

Response:

- Status: 400 Bad Request
- Time: 88 ms
- Size: 205 B
- Body:

```
1 [
2   "Category name must not contain any numbers only characters"
3 ]
```

Create Category Fails

The screenshot shows a REST client interface with a POST request to `{{baseUrl}} /api-category/create-category`. The request body is a JSON object with a long "name" and a "description". The response is a 400 Bad Request error with the message "Category name must not exceed 200 characters".

Request:

```
POST {{baseUrl}} /api-category/create-category
```

Body:

```
{
  "name": "This text is exactly three hundred characters long, including all spaces and punctuation marks. You can use it as a placeholder or layout test for any character-limited field, social media post bio, or database testing tool. It is balanced to look like a normal and organic English paragraph",
  "description": "Electronic"
}
```

Response:

```
[
  "Category name must not exceed 200 characters"
]
```

Status: 400 Bad Request • 282 ms • 191 B

Create Category Success

The screenshot displays an API client interface for a POST request to the endpoint `{{baseUrl}} /api-category/create-category`. The request body is a JSON object: `{ "name": "Electronic new", "description": "Electronic 2" }`. The response is a 201 Created status with a JSON body: `{ "message": "Category created successfully" }`. The interface includes tabs for Docs, Params, Authorization, Headers, Body, Scripts, and Settings. The Body tab is active, showing the request and response JSON. The response status is 201 Created, with a response time of 54 ms and a size of 194 B. The response is saved and can be previewed or visualized.

LibraryManagment Copy 2 > api-category > create-category > /api-category/create-category

POST {{baseUrl}} /api-category/create-category

```

Update Category Falis

The screenshot shows a REST client interface with a dark theme. The top bar contains tabs for Docs, Params, Authorization, Headers (10), Body (selected), Scripts, and Settings. A Cookies link is on the far right. Below the tabs, there are radio buttons for request types: none, form-data, x-www-form-urlencoded, raw (selected), binary, GraphQL, and JSON (with a dropdown arrow). To the right of these are links for Schema and Beautify. The main area displays a JSON request body:

```
1 {  
2     
3   "name": "string",  
4   "description": "string"  
5 }
```

The bottom section shows the response. It has tabs for Body (selected), Cookies, Headers (4), and Test Results. A red status bar indicates a **400 Bad Request** with a duration of 28 ms and a size of 170 B. To the right of this are icons for a globe, a link, and a menu, followed by the text "e.g. Save Response" and a three-dot menu. Below the status bar, there is a dropdown for the response format (set to JSON) and buttons for Preview and Debug with AI. The response body is shown as a JSON array:

```
1 [  
2   "Category id is required"  
3 ]
```

Update Category Success

The screenshot displays a REST client interface with a dark theme. The top navigation bar includes tabs for Docs, Params, Authorization, Headers (10), Body (selected), Scripts, and Settings. A Cookies link is visible on the far right. Below the navigation bar, a row of radio buttons allows selecting the request body format: none, form-data, x-www-form-urlencoded, raw (selected), binary, GraphQL, and JSON (with a dropdown arrow). To the right of these buttons are links for Schema and Beautify. The main area shows the request body in raw format, a JSON object with three fields: id (6), name (new name), and description (new description). The bottom section contains tabs for Body (selected), Cookies, Headers (4), and Test Results. A status bar indicates a 200 OK response with a 231 ms duration and 177 B size. To the right of the status bar are links for Save Response and a menu icon. Below the status bar, a row of icons includes a JSON schema icon, Preview, Visualize, and a dropdown arrow. The response body is shown in JSON format, containing a single field: message (Category updated successfully).
